Subject: Updated timing outlook for the dexos1 Gen 4 specification

Dear dexos® formulators and Industry Partners

GM continues development of the dexos 1 Gen 4 test program. SPI, GMOD-DI and IVD are planned for industry technology demonstrations by Q2 2027 to support test development and industry familiarization. Demonstration procedures, participation details, and applicable data-handling expectations will be shared in advance. Further test details will follow as final adjustments are completed.

The current forecast for release of the dexos 1 Gen 4 specification is Q2 2028. This is an estimate, depends on successful completion of ongoing development work, and is subject to change. GM plans to provide an update on test development and timing in Q1 2027.

We appreciate the continued collaboration and support of our additive and oil marketer partners as we work together to bring dexos 1 Gen 4 to market.

This communication is for informational purposes only and does not create any obligation or commitment by GM regarding the content or timing of any specification and should not be understood to modify any existing agreement(s) or approval(s).

Sincerely,

Khaled A. Zreik
